

Application No.: 09/185208

Case No.: 54537US003

Amendments:

The following Listing of Claims will replace all prior versions, and listings, of claims in the application:

Amendments to Claims:

Please amend claims 1, 5, 6 and 7 as follows.

Listing of Claims

1. (Currently Amended) A coated article having a textured film backing with a top surface and a bottom surface, and on the top surface, a layer of pattern-coated particulate filled low adhesion backsize (LAB), such that there are areas on the top surface of the textured film backing that are coated and areas that are uncoated and the appearance of the coated and uncoated areas on a textured film backing is visually uniform, wherein the average particle diameter of the particulate is ~~greater than~~ at least about 1 μm and the particulate filler has a typical diameter that is greater than the thickness of the low adhesion backsize coating layer.
2. (Original) The coated article according to claim 1 wherein the particulate filler is an amorphous silica.
3. (Cancelled)
4. (Original) The coated article according to claim 1 wherein the particulate filler is present in the range of 1 to 15 parts by weight of the low adhesion backsize coating.
5. (Currently Amended) A tape pad comprising pre-cut tape strips disposed one on top of another, such that each tape strip comprises a textured tape film backing having first and second opposite major side surfaces and first and second opposite ends with the first end of each tape strip being in alignment with the second end of an adjacent tape strip in the stack, and a layer of adhesive permanently adhered to the first side surface of the textured tape film backing, the layer of adhesive of each tape strip being releasably adhered along the second surface of the

Case No.: 54537US003

adjacent (lower) tape strip in the pad and the second surface of each textured tape film backing is pattern coated with a particulate filled low adhesion backsize layer, wherein the average particle diameter of the particulate is greater than at least about 1 μ m and the particulate filler has a diameter that is greater than the thickness of the low adhesion backsize coating layer.

6. (Currently Amended) A tape roll comprising a textured tape film backing having first and second opposite major side surfaces, wherein a layer of adhesive is permanently adhered to the first side surface of the textured tape film backing, the layer of adhesive being releasably adhered along the second surface of the adjacent layer of textured tape film backing strip in the roll and the second surface of each textured tape film backing is pattern coated with a particulate filled low adhesion backsize layer, wherein the averagetypical particle diameter of the particulate is greater than at least about 1 μ m and the particulate filler has a typical diameter that is greater than the thickness of the low adhesion backsize coating layer.

7. (Currently Amended) A coated film comprising a textured film having a top surface and a bottom surface, and the top surface has a layer of pattern-coated particulate filled low adhesion backsize, such that there is first area coated with a first low adhesion backsize and a second area coated with a second low adhesion backsize and the appearance of the two coated areas on the film are visibly uniform, wherein the averagetypical particle diameter of the particulate is greater than at least about 1 μ m and the particulate filler has a typical diameter that is greater than the thickness of the low adhesion backsize coating layer.

8. (Original) The coated film according to claim 7 wherein the first and second low adhesion backsize are the same.

9. (Original) The coated film according to claim 7 wherein the first and second low adhesion backsize are different.

10. (Original) The coated film according to claim 8 wherein the first area and the second area are coated with different patterns.
